PROFILE

I'm an Applied AI and Analytics student at Nanyang Polytechnic who loves building things people actually use, like the deadline tracker that placed 2nd at the AWS × NYP Hackathon. I care about the parts users never see: keeping data private and making sure nothing breaks when things fail. Now looking for a software engineering internship to learn and ship real work.

PROJECTS

DeadlineIQ – Academic Deadline Tracker — **2nd place**, AWS × NYP Hackathon 2026
AWS Lambda, API Gateway, DynamoDB, EventBridge, SNS, CloudFront, React 19

- Owned notifications and user experience (7 of 23 use cases, ~4,700 lines) in a team of four; deployed live on AWS.
- Built reminders with quiet hours and a three-a-day cap, made idempotent so a retry never messages a student twice.
- Built a calendar feed that keeps deadlines live in Google, Apple and Outlook calendars.

Defects Inspection & Management Platform — Team project, 2026
Node.js, Express, Socket.IO, Supabase (PostgreSQL), Cloudinary

- Built the real-time layer on Socket.IO with role-based rooms, so users only receive data they own.
- Rebuilt notifications to reach offline users, wired to ~20 lifecycle events across the app.
- Found and fixed a privacy bug that leaked one household's updates to every resident in their block.
- Built the contractor portal (task queue, photo and e-signature uploads) and fixed a bug that could crash the server.

nomnomz – AI Food-Logging Telegram Bot — Individual
Python, Claude vision API, SQLite, Telegram Bot API, Linux / systemd

- Built and deployed a bot that turns a meal photo into a logged nutrition entry, running 24/7 on a cloud VM.
- Used structured tool calling so the AI returns reliable data from dishes, nutrition labels or text.
- Added a confirm-or-correct step so nothing is saved until the user approves the estimate.

Genlink – Intergenerational Social Platform — Team of five, NYP
Flask, MySQL, Socket.IO, Jinja2, Bootstrap | Live: genlink-283z.onrender.com

- Built the connections system, with age-group search so youth, adults and seniors can connect across generations.
- Built a personalised home page showing each user's interests and recent stories from their connections.

AWARDS & LEADERSHIP

2nd Place, Assignment Deadline Tracker Category – AWS × NYP Hackathon — 2026

Outstanding Achievement Award – AWS Student Builder Group at SIT — Aug 2026

Vice Captain – NYP Women's Floorball — CCA, 2026 – present

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS
Web: React, Tailwind CSS, Bootstrap, Node.js, Express, Flask, Socket.IO, REST APIs
Cloud & data: AWS (Lambda, DynamoDB, EventBridge, SNS, CloudFront), PostgreSQL, MySQL, SQLite
AI & analytics: Claude API (vision, tool calling), SAS (predictive modelling, forecasting), KNIME
Tools: Git, GitHub, Linux, VS Code

EDUCATION & CERTIFICATIONS

Diploma in Applied AI and Analytics, Nanyang Polytechnic — 2025 – 2028 (expected)
Specialisation: SAS – NYP Academic Specialisation in Predictive Analytics & Forecasting (Tier 3, SAS, Oct 2026)
Certifications: AI4I – Literacy in AI (AI Singapore, 2026) · Basic Proficiency in KNIME Analytics Platform (KNIME, 2026) · AI Fluency: Framework & Foundations (Anthropic, 2025) · Web Development Fundamentals (IBM SkillsBuild, 2025) · User Experience Design Fundamentals (IBM SkillsBuild, 2025)
Languages: English (fluent), Chinese (conversational)
